

Mr. Scott's Classes

Time is starting to run out of the 2009-2010 school year! We have one quarter to go and lots of things to cover.

In my Algebra class, we will be finishing up our work with linear equations and inequalities and then move into reducing monomials and factoring polynomials. We may even get a little bit into using the quadratic formula.

In my pre-Algebra classes, we will be moving into some work with ratios and proportions. It will involve some calculations with fractions and decimals along the way. We may then move into some algebra uses in geometry.

In my course 3 math class, we will be doing some work with ratios and proportions as well. We will then take a look at fractions, decimals, and percents and how to use the knowledge we gained in ratios and proportions to solve some percentage problems.

In my language arts classes, we will complete our work on our speeches and move into a research paper. Students will be asked to research something they would like to know more about. We will then use the resources of the IMC to find the information to put into the reports. For this project, students will be asked to make a bibliography entry for each resource they use. Most of the research can and will be done during class, but students are encouraged to look for information on their own time as well.

ITBS tests for 7th and 8th graders will be begin around April 19th. All tests will be given during normal class periods.

Keep looking for homework on a daily basis. With the weather heating up and the call of the great outdoors, it is easy to put work aside to go play. Help us to help your child finish the year strongly!

DJ Scott
